Bull & Female Sale

Your Northern Source
for Fleckvieh Genetics

Sale Starts
FEBRUARY 7TH AT 1:00 PM

James Creek Simmental Welcome

Greetings and Welcome to our 9th James Creek Simmental Private Treaty Bull & Female Sale! This past spring and summer had many challenges for most in the agricultural world. With that behind us we are enjoying this dry time for feeding cattle. We are excited to offer these selected bulls and females for your consideration. All summer long we have been impressed with this set of bulls and couldn't wait to show them to you. Now the time has come and we are confident that these selected individuals will impress you too.

This year we will be offering the purebred replacement heifers to the sale. We felt we could offer these heifers because of our goal of having an all fullblood herd. The heifers are what we would be keeping if they were fullblood. These are solid heifers with the genetics that can produce the bulls that you will see in the bull offering.

The bulls and heifers were given Bovi-Shield 5 and 7-way with haemophilus in May before going to pasture. The same vaccinations were given in October before weaning. Bovi-Shield 5 was boosted after weaning, in December. We poured the bulls with generic I vomec at weaning.

The bulls and heifers were weaned on November 3, 2011. They are on a TMR that consists of whole corn, modified distillers, alfalfa, grass hay, and a mineral supplement. We are working with Joel Ostendorf of CHS nutrition to build our rations. This ration is balanced to a 14% protein level and an energy level of .54 net energy gain. These rations have worked really well for us the past few years and the bulls have gone on feed very easy.

We have included some information that we are tracking for our own use. Using the cows weight at weaning time we can determine the calves performance against the cows weight for birth weight and weaning weight. These are expressed as a percentage of the cows weight and are located on the individual bull page. The weights used are the actual weights taken on October 26, preg checking and vaccination time. Our herd average the last several years is 6-7% for birth weight and 43% for weaning weight.

December 23, 2011, weights, frame score and scrotal measurements were taken. The frame score and scrotal measurements are listed as an adjusted number to one-year of age.

Check our website for performance updates and color photos of the bulls. We will have another set of weights around January 31, 2012. Come early and have lunch with us starting at noon! We hope to see you.

A standout bull that will be easily admired. A Marcus son that will make tremendous steers and replacement heifers. Marcus is known for calving ease and color pattern. We used him to add the polled factor and increase calving ease. We feel this bull will do that and more. Number 4 for birth weight. Full Fleckvieh.

Really super bull, which comes from an outstanding cow family. This bull's dam does her homework every year. Don't let his color pattern throw you; he will keep you in the performance game for years to come. Number 3 for weaning weight. Look at his weaning weight percent! Keep in mind this is only a March 29 bull. 13/16 Fleckvieh.

A real performance bull from Jerico. We selected Jerico, from Bonchuks in Canada, to add Houston to our breeding program. 410 combines several foundation females of the breed into an outstanding individual. Similar breeding as the Y202 bull and maternal granddam is same as 325 bull. Be ready for extra pounds with these bulls. Full Fleckvieh.
